

WHAT CAN WE DO?

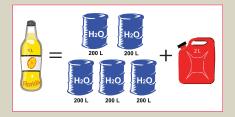

* National parks and protected areas help maintaining biodiversity.

By protecting of the 17 most important biodiversity hotspots, i.e. 1.3% of emerged earth surface, one could preserve 40% of vegetal species and 25% of animal species. An initiative from Greenpeace aim to protect 40% of oceans in order to allow sustainable use of sea resources.

* Juice: orange or apple?

Prefer local seasonal products from biological agriculture.

For example apple juice is produced locally, whereas orange juice is imported and requires the equivalent of 1,000 litres of water and 2 litres of petrol for producing pour 1 litre of orange juice.

* Buy fish and seafood with MSC label (for wild catch) or bio label (pisciculture). Facilitate the choice by using WWF advices.

In your garden, cultivate only local species and do not plant any exotical pest plants or genetically modified plants. www.cps-skew.ch/english/black_list.htm

> Do not release domestical animal in the wild (turtles, snakes, frogs, fishes, ...). They can be invasive and potentially dangerous for native species.
